# **SUMMARY**

Technical Project Manager with expertise in software development and AI-driven solutions, bringing a deep understanding of scalable backend infrastructures and cloud services. Experienced in leading cross-functional teams, optimizing system performance, and delivering impactful B2B SaaS products. Adept at project planning, risk management, and ensuring timely delivery of high-quality solutions in fast-paced, innovation-driven environments. Committed to driving technological advancements that maximize customer value and operational efficiency.

#### **EXPERIENCE**

#### Founder

Tan.ai

July 2024 - Present, Fall City, WA

- · Developed and launched Tan.ai, an AI-driven iOS application providing personalized tanning advice.
- · Created a seamless authentication process using UUID-based user identification, minimizing onboarding friction with a secure, account-free approach.
- $\cdot \ \, \text{Optimized backend architecture through AWS integration, enhancing data security and reducing latency by 25\%.}$
- Implemented a custom-trained AI model for skin tone detection, leveraging OpenAI's API to provide personalized tanning recommendations while optimizing cost efficiency.
- · Utilized image analysis techniques to generate data-driven user insights, enhancing the overall user experience and personalization.

# Co-founder/President of Algorithms and Analytics

**Vcrypt Software LLC** 

January 2024 - Present, Corvallis, OR

- · Led the development of backend systems for financial market data solutions, utilizing Rust and Python with a React Native frontend, and integrated Stripe for payments and OAuth for secure authentication.
- Spearheaded the design and deployment of trading algorithms, including long-term, intra-week, and high-frequency strategies, hosting these solutions as cloud-based web services.
- Enhanced data processing efficiency by 30% through advanced algorithm optimization in Python, boosting predictive analytics capabilities for strategic decision-making.
- · Secured initial funding by leveraging algorithmic performance, demonstrating business acumen in resource acquisition and user base expansion.

## Founder

**Bobcat Trading** 

December 2023 - Present, Corvallis, OR

- Established and led a financial community of over 30 college students, facilitating opportunities to earn additional income through market arbitrage alerts.
- · Automated financial data collection and analysis using Python and financial APIs, reducing manual effort and enabling efficient market participation.
- · Created a sustainable revenue model using a tested arbitrage strategy, generating consistent monthly income while fostering a collaborative and educational environment.

# **EDUCATION**

### **Bachelor of Science Computer Science**

Oregon State University · Corvallis, OR · 2022-2026

#### INVOLVEMENT

#### **Public Relations**

Oregon State University • Options Trading Club • January 2024 - Present

- Developed an automated system using Python (Selenium and Playwright) to scrape financial market data, delivering daily summaries and actionable trading insights to club members.
- · Coordinated team efforts as a lead member, ensuring effective communication, accurate data delivery, and successful technical execution for our audience.
